# Sprint 2: Retrospective report

Duration: 14 days

_____

Goals:
1. Implement CRUD functionality for user profiles
2. Implement bookings and booking management
3. Complete UI skeletons for dashboard
4. Integrate form validations

What went well:
1. Profile CRUD backend was completed and tested
2. UI components completed early in the sprint and reused later
3. Consistent commits on github, showing effort across team
4. Basic test plan defined
5. Successfully set up CI/CD pipeline

What went wrong:
1. Severe time management issues — work delayed until last few days, creating unnecessary pressure
2. Sprint meetings inconsistent — after the first one, most follow-ups didn't happen due to miscommunication and scheduling clashes.
3. Notion outage during sprint disrupted access to backlogs, sprint tasks and progress boards
4. No mid-sprint check-ins - didn't identify blockers early

*Blockers - notion down for 3 days, unclear task delegation, poor scheduling and planning*

Actions for next sprint:
1. Export Notion boards to pdf regularly to prevent future disruptions
2. Define mid sprint check-in regardless of progress
3. Add task owner labels early in the sprint
4. Improve time estimates using story points and prioritize easier wins early in the sprint to build momentum.
