Sprint 3: Retrospective report

Duration: 7 days

_____

Goals:
1. Implement user reports and report managements
2. Implements announcements
3. Conduct user testing

What went well:
1. Excellent time management — tasks evenly spaced out across sprint
2. Testing fully implemented for key features using Jest and functional test cases
3. Good task distribution - everyone contributed meaningfully to assigned tasks
4. No merge conflicts due to consistent branch usage and timely pull requests
5. Mid sprint review meeting helped identify and resolve UI alignment issues early

What went wrong:
1. Some tests behaved strangely initially but was fixed mid sprint
2. Slight underestimation of time needed or integration testing
3. Minor UI components deprioritized in favour of functional components

Actions for next sprint:
1. Schedule early test runs to catch integration issues before merge
2. Buffer extra time in sprint planning for UI polish
3. Continue balanced task distribution — it worked very well this sprint
4. Document testing strategy clearly so late joiners/contributors can replicate setup easily
